Release Notes

of Software Version 2.4.2

for products
006-130-117
006-130-118
006-130-132
006-130-133

Content

1. Document history

Version	Date	Author	Changes
1	2022-11-22	Andreas Kochner	Document created

2. Release Information

This documentation concerns a software release for the products

Part No	Description
006-130-117	ROQSTAR Managed 2GE+8FE Gigabit Ethernet Switch M12
006-130-118	ROQSTAR Managed 2GE+8FE Gigabit Ethernet Switch M12 PoE
006-130-132	ROQSTAR Managed 10 Port Gigabit Ethernet Switch M12
006-130-133	ROQSTAR Managed 10 Port Gigabit Ethernet Switch M12 PoE

Software release information:

Attribute	Value
version	2.4.2
build date	2022-11-21
file name	006-130-117_118_132_133_update-2.4.2.raucb
file size	24447165 Byte
file MD5 checksum	3a3d9b88e46d5a9f94bb11ead01fb022

3.   Change Log

3.1.   New Features and Improvements

Topic	Description
Hardware Changes	Support for changed Hardware

3.2.   Known Issues

Currently known errors or unexpected behavior of this software release:

Issue ID	Topic	Description
77	LLDP	The value of the field "Chassis ID Type" in the sent LLDP packets is "local" instead of "mac".
84	SNMP Traps	The generated SNMP Traps contain the the agent address of 127.0.0.1.
104	SNMP	When "disabling" SNMPv3, the SNMPv3 protocol is not actually disabled. Instead only the configured SNMPv3 users are disabled. This means that the access via SNMPv3 is properly prevented, but the response a client sees is slightly different (i.e. "invalid user" instead of "protocol not supported").
105	RSTP	If RSTP is changed from "disabled" to "enabled" during operation, the first STP packet (BPDU) sent at every port will not contain the configured Bridge Priority, but the number 32768. Every subsequent packet will contain the expected configured number. Packets sent at startup behave as expected.
122, 195	Web interface	If the internal time is updated via NTP after LLDP neighbours were detected, the displayed "age" of those neighbours is very old. The same will happen to DHCP leases.
151	IP Interfaces	Manually configuring an IP Address on an IP interface which has DHCP Client active on it, will temporarily overwrite the received dynamic IP address with the newly configured one.
193	Log	When a link is disabled and re-enabled, under some conditions the log may contain the "Link up" message twice.
212	DHCP Leases	When an active DHCP lease is migrated form one port to another by changing the configuration, the still active DHCP lease will be displayed on the wrong port in the web interface.
223	DHCP	When switching between "This Switch" and "Other Server" the Lease Settings are not updated completely. **Workaround:** After changing between "This Switch" and "Other Server" always press "Set DHCP Subnet Configuration".
240	DHCP	When ROQSTAR is running both DHCP Server and DHCP Client on the same VLAN this can lead to configurations that cannot be applied on the device. **Workaround:** Don't mix DHCP Server and Client on the same VLAN.
244	LED	If a USB memory stick is plugged in during boot the MOD LED does not show the USB operation.

3.3. Notes

Hints and considerations for proper usage specific to this software version:

Note ID	Topic	Description
-	web browsers	For best experience when using the device's web interface the following browsers are recommended: • Microsoft Edge, version 103 • Mozilla Firefox, version 103 A screen resolution of at least 1680*1050 is recommended.
-	software update, conversion of configuration files	Software versions 2.x.x bring more features and add additional options to existing features. Because of this the configuration file structure was changed compared to software versions 1.x.x. During the software update from a 1.x.x software the device converts the existing configuration to the new format. We suggest to do two things: 1. Before performing the update, download the existing configuration. In case you decide to downgrade later this could be helpful. 2. After performing the update, check if all settings were converted as desired.

4. Further Information
